Bio-growth in HVAC systems is inevitable UV-C light is the cost effective and sustainable solution

Air conditioning has brought great benefits to people in terms of productivity in the workplace and making our lives far more comfortable at home as well. It has become ubiquitous and fully integrated into everyday life.

As air conditioning came into use, the need to maintain the equipment became necessary to keep the air flowing smoothly and drain pans from clogging.

UV is effective, energy saving and the only method that continually keeps bio-growth from taking hold in the constantly wet coils, drain pans and other moist areas which are ideal breeding ground for microbes.

Ultravation® also manufactures both HVAC airstream disinfection and convection-driven upper room products that have been suggested by the American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE). They emit pure 254NM UV-C (UVGI) with no production of ozone.

UV light is nature's way of controlling bio-growth

Natural UV light controls microbial populations outdoors. UVMatrix™ brings UV inside.

It has been shown that even a thin bio-film measuring just a few thousandths of an inch on a cooling coil can reduce HVAC efficiency by 30% to 50% — as well as cause HVAC odors. Adding germicidal UV with intensity far beyond that found outdoors is well worth consideration for maintaining the efficiency and cleanliness of an HVAC system.

Non-chemical sustainability

UV light does not pose a threat to the environment and consumables are recyclable.

UV-C short wave ultraviolet light generates no ozone

Ultravation UV lamps are focused at the most lethal wave length of UV light — the UV-C range — and specifically centered on 254nm. It is possible for UV to generate ozone, it does so at the lower frequency of 185nm which is not emitted by Ultravation UV lamps for disinfection.

Ultravation UV is 40% more intense with two-year (18,000 hr) UV lamp life

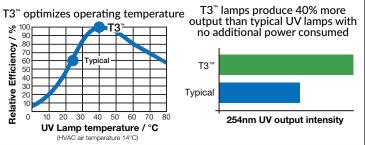

40% additional UV intensity over typical UV installations by **Ultravation's T3 UV Lamp technology.** The UV lamps are encased in water-tight transparent quartz sleeves that insulate the lamp, optimizing operating temperature. UV intensity is raised and lamp life is doubled without additional power consumption.

Real time monitoring

Sensors that monitor actual UV intensity are available that provide assurance of needed UV-C dose at all times. Available for all UVMatrix products.

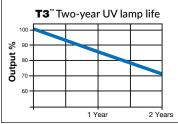

Continually clean and efficient: Without UV, manual / chemical cleanings are needed to restore efficiency, but performance begins to degrade almost immediately. Peak operation is limited. UV disinfection maintains peak efficiency for substantial energy conservation. T3[™] optimizes operating temperature T3[™] lamps produce 40% more

HVAC cooling efficiency

with UVMatrix™

HVAC cooling efficiency with

annual chemical cleanings

T3™ design encases UV lamps in protective quartz glass sleeves that insulate the lamp from the cold HVAC airstream, allowing them to operate at optimum temperature.

UVMatrix™ SI

HVAC coil and interior surface disinfection

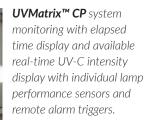

The UVMatrix SI-Series is an innovative UV equipment design that stresses germicidal effectiveness as well as HVAC energy efficiency. It is also engineered to facilitate installation, maintenance, longevity and a low cost of ownership.

- Built-in expansion system assures excellent fit and UV exposure
- Stainless steel construction available
- Complete system no extra framework or hardware to purchase
- Rapid return on investment
- Reduces wear and tear, extends HVAC lifespan
- Complete assessment and sizing service provided

Factory techs available for installation:

Ultravation engineers are available to assist with specifying product configuration and sizing as well as provide on site installation.

Expands to fit any HVAC system, new or retrofit

The SI-Series extends for perfect fit — sliding adjustability widens for exact fit! Ensures optimized UV coverage for all air handlers. Ships disassembled in a compact carton with 15 minute assembly procedure.

Escherichia co

Pseudomonas aerugino

The SI-Series is self-contained and does not need additional framework or hardware.

UVMatrix™ **AS** airstream disinfection for healthier working environments

The UVMatrix™ AS-Series is capable of exposing airborne microorganisms circulating through an HVAC system to high levels of UV-C energy. A major benefit of HVAC airstream disinfection is the reduction of airborne bacteria and viruses that accumulate in one area from being spread to other areas of the building. Another is the ability to apply a very intense germicidal dose with needed exposure or dwell time since people are completely shielded from the germicidal UV light.

Better Air | Better Water | Better Living

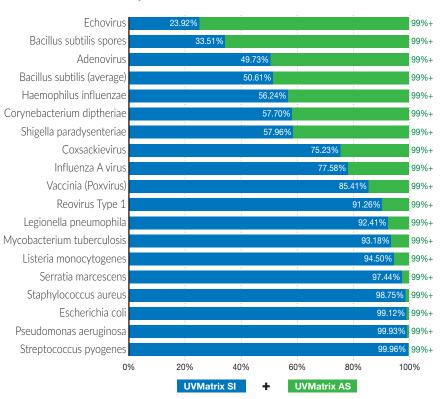

T3™ temperature

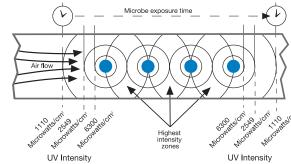

intensity UV-C lamps

optimized, high

The AS-Series can be configured for nearly any airstream disinfection task. It is often used in tandem with UVMatrix SI as an efficient, unified system that provides coil and surface irradiation while efficiently combining the airstream disinfection of both systems.

Getting the right UV dose: Ultraviolet light disinfection effectiveness is based on UV intensity and duration of exposure. UVMatrix™ AS installs in-line along the ductwork to obtain necessary contact or dwell time. Pre and post testing can be performed to confirm performance. Realtime UV intensity monitoring is available

Factory technicians are available for HVAC analysis and UV system installation

Ultravation engineers can determine the configuration including the number of UV lamps needed to meet the target inactivation goals. System installation and commissioning by factory engineers is available. Shown here are lamp array examples based on HVAC configuration and needed UV dose.

UVMatrix™ **LCI** modular UV-C disinfection

Independent testing confirms disinfection performance

Viral challenge studies were designed by the independent testing firm **Innovative Bioanalysis**, **Inc. of Costa Mesa, California**, to determine the efficacy of the **Ultravation LCI UV-C** air and surface disinfection system against coronaviruses, specifically SARS-CoV-2. The validation of the results was confirmed in testing following industry and ASHRAE recommendations and guidelines. The results showed that **99.99% of the target virus was deactivated within 2 seconds of exposure** (see full report data at Ultravation.com).

Real-time 254nm UV Monitoring:

UV-C intensity and operational live monitoring available.
Can be integrated with building automation.

Ultravation UVMatrix LCI-Series is a breakthrough in flexibility in UVGI for HVAC air handlers. Available in 2, 4 and 6-lamp

configurations that can be combined for complete germicidal coverage of any cooling coil configuration. UVMatrix LCI is a highly efficient solution to achieve target performance for surface disinfection (coils, drain pan, blower) and is easily configured for in-duct airstream disinfection (see facing page).

Modular design/build:

Choose from 33-, 44- and 64-inch Ultravation® T3™ UV-C lamps.

Remote, water-tight power cabinet:

All lamps powered from a single power source installed inside or outside the air handler.

The ultimate in flexibility:

Install different UV-C lamp lengths as needed using the same power enclosure.

Customizable 20 ft. UV-C lamp leads:

Easily create clean cable runs while maintaining fast and efficient installation.

Lamp mount options:

Fasten lamps to vertical supports with strong magnets or aluminum brackets.

Design flexibilty for perfect fit and optimized UV-C coverage

The design flexibility of the UVMatrix LCI system allows for multiple lamp lengths to be used by the same enclosure for optimized UV-C coverage. Modular frame design

with aluminum supports are pre-drilled for accurate lamp positioning / adjustable length assures fit with any coil with no cutting needed.

NEMA-4X rated

electrical cabinet for operation outdoors and in wet areas. The cabinet is fiberglass and weather-tight for corrosion resistance.

UVMatrix™ **PCO** odor and VOC reduction

Independent testing confirms disinfection performance

Viral challenge studies were designed by the independent testing firm Innovative Bioanalysis. Inc. of Costa Mesa, California, to determine the efficacy of the **Ultravation UVMatrix PCO** air and surface disinfection system against coronaviruses, specifically SARS-CoV-2. The validation of the results was confirmed in testing following industry and ASHRAE recommendations and guidelines. The results showed that 99.99% of the target virus was deactivated on surfaces within 30 minutes of exposure (see full report data at Ultravation.com).

UVMatrix PCO continuously cleans the HVAC air stream, reducing microbial populations, VOCs

Creating healthier and productive indoor environments

The UVMatrix PCO purification system creates healthier and cleaner indoor air by breaking down air contamination in the HVAC airstream. The photocatalytic oxidation or PCO process is germicidal to intercept circulating microbes/pathogens of all types (killing bacteria and viruses in seconds) and will remove potentially harmful VOCs (volatile organic compounds), odors, and other airborne chemical compounds by breaking their chemical bonds.

The process

The air purification modules are coated with a patented titanium dioxide (TiO2) + zinc (Zn) and silver (Ag) ion PCO formulation. The PCO formulation is energized by UV-C light, driving the interaction of the PCO formulation with airborne contamination, resulting in the breakdown of the molecular structure of the contamination into its non-harmful component parts. In the case of biological contamination, UVMATRIX-PCO-24-10 both the UVGI and the PCO formulation come into play—the UV-C light penetrating and destroying DNA and the PCO process reacting with and destroying cellular membranes.

Versatile and expandable

The UVMatrix PCO series is designed for HVAC systems from 1,200 to 8,000 CFM. Two sizes are available to accommodate any HVAC configuration with a rate of effectiveness. The system can also power a second PCO module if VOC / odor levels call for it. Or, add a 12" or 17" high-intensity UV-C lamp for surface disinfection. UVGI disinfects the HVAC coil (which can significantly lower HVAC energy consumption), drain pan and other surfaces. It also works in tandem with the PCO module to create two disinfection zones in the HVAC airstream for an intensified reduction of airborne pathogens.

UVMatrix[™] PCO Features

- Two module sizes: 4" and 10"
- 18,000-hour lamp life
- 10-year system warranty (excludes lamp)
- 1-year UV lamp warranty
- Easy maintenance with extended two-year UV-C lamp replacement interval.
- Available T3[™] enhanced lamp system for surface disinfection and additional pathogen reduction.

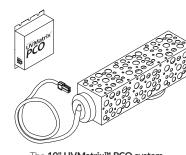

- Reliable and UVC-optimizing electronic power supply helps extend lamp life.
- Compact Power Supply: just 3.5" x 3.5" x 1"
- Available for 24, 120-277 VAC operation
- 6 ft. power cord (24 VAC models)
- Installation is straight-forward with pre-installed magnet mount design.

The UVMatrix™ PCO-24-2-10 features two 10" PCO modules that connect to the power supply using a Quick Connect Y Adapter.

The **UVMatrix™ PCO-24-10** features a PCO module and an **EZ-Light 6P Germicidal UV-C** lamp (UV lamp available in 12" and 17" lengths. and uses the Quick connect Y adapter to connect.

Additional configurations are available

Installs in any packaged system

All models available with a 120-277 VAC power supply or a 24 VAC power supply.

UVMatrix™ **CIS** rapid pulse air ionization

Micro and nanoparticles have been found to have adverse affects on those with respiratory and cardiovascular issues—especially since they readily pass through natural respiratory defenses. Odors, VOCs and gases are made up of complex molecules.

Ultravation® UVMatrix™ CIS rapid pulse ions statically charge nanoparticles so they attract into groups that quality filtration can capture. CIS ions react with complex molecular and biological contamination, decomposing it.

Benefits include:

- Micro and nano-particulate capture
- Odor and VOC reduction
- Breakdown of smoke and airborne toxic chemicals

CIS36: Designed for large air handlers

• Augmentation of UV-C disinfection to increase the reduction of airborne bacteria and viruses

Three configurations are available to accommodate a wide range of applications. Installation options ranging from 4 ton HVAC systems to large air handlers. Applications include:

- Large office buildings
- Small and medium offices
- Government buildings
- Animal facilities
- Nursing homes / elderly care centers
- Animal facilities

The UV Matrix CIS 54-inch wide 12-pin ionizer (pictured below) can be installed directly in many air handlers. Using the optional VXP rack it readily fits virtually any large air handler to

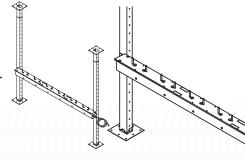

Cruise ships

install a single or multiple units—usually on the return side of the HVAC coil.

- Manufacturing
- Medical and veterinary centers
- Schools

- Law enforcement
- Prisons
- Nail salons
- Food service

•The Ultravation VXP rack is compatible

for single or multiple unit mounting. (see more about VXP racks on pages 8 and 9)

CIS12: Ionization for 7-12 ton HVAC systems

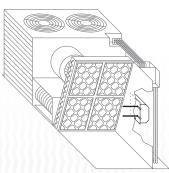

The UV Matrix CIS-12 is a 4-pin ionizer that can be used singularly or in multiples.

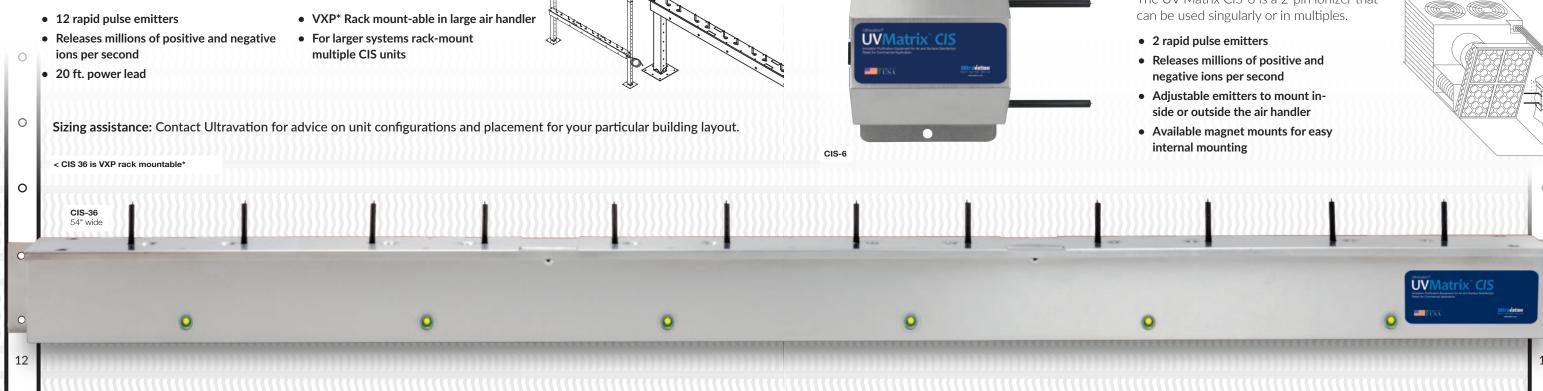

- 4 rapid pulse emitters
- Releases millions of positive and negative ions per second
- Adjustable emitters to mount inside or outside the air handler
- Available magnet mounts for easy internal mounting

CIS6: Ionization for 4-6 ton HVAC systems

The UV Matrix CIS-6 is a 2-pin ionizer that

BIOGARDUV[™] "Upper Air" UV system

Air disinfection for individual rooms and public spaces

Ultravation® BioGardUV™ germicidal ultraviolet air disinfection (UVGI) destroys airborne pathogens by creating a disinfection zone in upper regions of a room (above 7 ft.) using UV light. Available as 100% silent convection models or fanassisted models with ion generation,

depending on the need. Air that becomes bio-contaminated and warmed in the lower part of a room (from respiration and other sources) naturally circulates to the upper regions, where it will be exposed to germicidal UV-C light, which kills airborne bacteria and viruses in seconds. To accelerate air flow, models with built-in circulating fans can be specified. Fan accelerated models (FS-22F and FS-33F) include bi-polar ionization that breaks down odors and airborne toxins, and facilitates microparticulate reduction while augmenting air disinfection. Since the UV light field is restricted to areas above seven feet, the room is safe for occupancy while the air is continuously disinfected. These systems do not produce ozone.

BioGardUV[™] is energy-efficient, using no more power than a fluorescent lamp. Models with fans use slightly more power to create a quiet but controlled circulation of air.

Two sizes are available in both wall-mount and ceiling mount models. Ceiling mount models install flush-to-ceiling or can be hung with optional pendents. Ceiling mount models create two disinfection zones, front and rear.

Sizing assistance: Contact Ultravation for advice on unit configurations and placement for your particular building layout.

Features:

- Focused 254nm germicidal UV-C wavelength
- 9,000 hour UV lamp life
- Energy-efficient
- Galvanized steel construction
- Safety interlock switch
- Powder-coat finish
- Optional bi-polar ionization

UVGI is recognized by ASHRAE*, the EPA and the CDC

UV has been proven in laboratory studies to achieve a 99.9% kill rate on static coronaviruses including SARS-CoV-2 in 2 seconds.

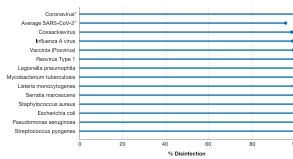

UV-C light is the only air disinfection technology that is supported as effective by ASHRAE.

ASHRAE's recommendation for airborne pathogen reduction: "Consider adding air treatment and cleaning devices such as UVGI (ultraviolet germicidal irradiation) in duct, plenums and air handling units and on the face of cooling coils."

To see ASHRAE's online guide to commercial building preparedness, visit: www.ashrae.org/technical-resources/commercial
